JACK BRIGGS

I am very focused on work, I go out of my way to do my job in ways that I think will result in a better outcome. I tend to think outside the box and like a challenge. I love to keep myself busy with work. I have dyslexia and dyspraxia but I don't let them hold me back from my work.

PROFESSIONAL EXPERIENCE

April 2018 – Present

SELF EMPLOYED - FREELANCE
I have been using my skills in web development and my understanding of computers to help other companies with their websites and computing needs, such as creating a huge websites for them using WordPress, Laravel, 100% custom (html, css, js, php) and dabbling in Vue, angular, react and other frameworks, I've even created complex systems to aid in their day to day work for internal and external use depending on the requirements, the system could integrate with other hardware and software already in use, in some occasions the hardware was not in use before and I helped them set it up remotely. I've helped with technical issues, setting up computers and systems such as active directory, proprietary software and more

May 2018 – March 2022

FULL STACK WEB DEVELOPER - YP SOLUTIONS
At YP Solutions I work as a Web developer. I manage my own time and clients that are directed to me via my current boss.
The websites that I am building vary depending on the client:
Custom Sites - Sites built using pure html, css, javascript, jQuery, php and anything to get the job done.
Wordpress Sites - Sites built using Wordpress, this is usually done with templates bought via envato and I have a wide experience with plugins for the system ,occasionally this would also include modifying the site's design or flow a lot.
Laravel Sites - Sites built using Laravel, instaled with composer, installed with npm. These sites are my most complex sites and are the big projects that I work on, WordPress sites have also been quite large too.
All of these sites I have had to manage my own timescale and contact with clients to get the best possible website for the client.
I have used WHM & cPanel with all of the sites, this is on Linux (Centos 7/8) servers with Apache I have full command line access to use the tools required for each site, Laravel is what usually brings me to the command line.
I use Git to keep my projects synced so that me and my co workers can work on the same project and it allows me to work from home on projects when needed.
I use SQL with the sites too in order to create, modify, drop etc databases and tables.
While making sites I will use whatever will get the job done best, this often includes using new systems or tying a few together.
I have used a variety of API when making sites, as well as a small or lite version of a custom API on some systems.
I am working on my Vue, React and Angular and am trying to integrate it where I can.
Examples available on request.

June 2017 – December 2017

APPRENTICE IT TECHNICIAN - BANDICOOT LTD
I worked at Bandicoot for a few months providing 1st line support to customers over the phone and over email, i created email accounts through office 365 and Microsoft Exchange, I remote controlled customers computers to fix problems and to install software remotely, Managed Active Directory, resetting sessions, changing passwords, assigning permissions and adding/changing users, I aided in design of websites (HTML, CSS, PHP, Wordpress), I Used Microsoft products such as Word, Excel, Access, one note and teams regularly, i fixed problems on remote servers when they developed them and i reconfigured server hardware. set up many different operating systems and recovered data from computers that would not boot up due to a major hardware fail. i did i small bit of programming in visual studio, using VBA, VB.net, C++ and C# and in powershell i made a script that will create a website on a server using IIS, mysql and file explorer, that all you needed to do was enter the name of the website and it would do the rest.
i also answered the door to customers and helped them find what they needed or who they needed and took in post, oh and made coffee! however i left as there was very little work in it i was bored most of the time leaning on my own.

EDUCATION

2015 – 2017

A LEVEL
BLACKBURN COLLAGE
Computing

2010 – 2015

GCSE
OUR LADY AND ST JOHN CATHOLIC COLLEGE
English Language - C
Mathematics - B
Biology - B
Chemistry - B
Physics - B
ICT - B
